PREFACE

Welcome to the third edition of *The Initial Public Offerings Law Review*. This publication introduces the reader to the main stock exchanges around the globe and their related initial public offering (IPO) regulatory environments, and provides insight into the legal and procedural IPO landscapes in 18 different jurisdictions. Each chapter gives a general overview of the IPO process in the region, addresses regulatory and exchange requirements, and presents key offering considerations.

The global IPO landscape is ever-changing. While several of the oldest stock exchanges, such as the New York Stock Exchange and London Stock Exchange, are still at the forefront of the global IPO market, the world's major stock exchanges now are scattered around the globe and many are publicly traded companies themselves. IPOs take place in nearly every corner of the world and involve a wide variety of companies in terms of size, industry and geography. Aside from general globalisation, shifting investor sentiment and economic, political and regulatory factors have also influenced the development and evolution of the global IPO market.

Virtually all markets around the globe have experienced significant volatility in recent years; however, 2018 marked a year of continued resurgence for many IPO markets. The number of 2018 IPOs and total proceeds raised were led by the Asia-Pacific exchanges, which accounted for almost 50 per cent of deals in terms of both number and deal volume. China alone was responsible for 307 IPOs valued at US\$56.7 billion. Many other regions also experienced strong IPO markets in 2018. Despite the temperamental nature of global economics, and the potential repercussions of various ongoing and expected geopolitical events, there is continued cautious optimism for 2019 in terms of both global deal count and proceeds. The global IPO pipeline includes many well-known companies across a range of industries, and it is anticipated that these companies will seek to list on a variety of stock exchanges around the world.

Every exchange operates with its own set of rules and requirements for conducting an IPO. Country-specific regulatory landscapes are often dramatically different among jurisdictions as well. Whether a company is looking to list in its home country or is exploring listing outside of its own jurisdiction, it is important that the company and its management are aware from the outset of the legal requirements as well as potential pitfalls that may impact the offering. Moreover, once a company is public, there are ongoing jurisdiction-specific disclosure and other requirements with which it must comply. This third edition of *The Initial Public Offerings Law Review* introduces the intricacies of taking a company public in these jurisdictions, and serves as a guide for issuers and their directors and management.

I INTRODUCTION

Local trade in securities began in the 1930s, before the establishment of the state of Israel. The Tel Aviv Stock Exchange (TASE), Israel's sole stock exchange, was established in September 1953 by a number of banks and brokerages, referred to as TASE members. Following the increase in listing of securities for trade on the TASE during the 1960s, the Israeli Securities Law 1968 (the Securities Law) was enacted and the Israel Securities Authority (ISA), the primary regulator for the Israeli securities market, was established.

The wave of initial public offerings (IPOs) that began in 2017 continued during the first half of 2018. However, the second half of 2018 experienced a sharp decrease in the number and volume of IPOs and securities offerings, resulting in a total of 14 equity IPOs on the TASE during 2018, compared with 17 in 2017 and 14 equity IPOs during 2012 to 2016. At the end of 2018, 448 companies had equity listed for trade on the TASE.²

Public offerings of debt are very common in Israel, with approximately 66 billion shekels raised in total in traded bonds offerings during 2018. Unlike US or European bond markets, which are structured as dealer-based over-the-counter markets, most Israeli corporate bonds are listed for trade on the TASE and the vast majority of the trading volume in exchange-listed bonds takes place on the exchange.

Over the past few years, the Israeli corporate bond market has become increasingly attractive to foreign issuers, with a growing trend of IPOs of debt in Israel by non-Israeli companies (primarily, US real estate companies with income-producing real estate, typically issuing the debt through subsidiaries incorporated in the British Virgin Islands), aiming to benefit from the relatively low interest rates, high liquidity, low offering costs and short 'time to market' offered by the local market. The aggregate amount of debt raised in bond issuances by non-Israeli issuers in 2018 was approximately 5.8 billion shekels, compared with approximately 850 million shekels in 2011. Though US real estate companies continue to be the primary type of foreign issuers of corporate bonds in Israel, this trend has expanded in recent years to foreign issuers from other industries, including US business development companies.

A recent development with regard to this trend is the dual listing of shares on the TASE of issuers whose shares are listed on certain leading global stock exchanges, enabling the issuers to benefit from the special disclosure regime (the Dual-Listing Regime) that is available to

2 '2018 Annual Review' published on the TASE website at https://info.tase.co.il/Heb/Lists/gen_res/0133_annual_review/2018_annualreview_heb.pdf.

dual-listed companies under the Securities Law, and the public issuance of debt in Israel pursuant to offering documents that are primarily based on the disclosure documents prepared under the laws of the jurisdiction of the foreign exchange, as further explained below.

IPOs in Israel are regulated by the ISA and the by-laws of the TASE.

II GOVERNING RULES

i Main stock exchanges

The TASE is the only stock exchange in Israel. It primarily attracts domestic issuers, from all industries.

Trading on the TASE is carried out between the current TASE members on behalf of their customers. With physical trading floors long abolished, the TASE's electronic platform, the Tel Aviv Continuous Trading (TACT) system, handles trades for all traded financial instruments. The TASE also operates a separate electronic trading platform known as TACT Institutional, designed for trading in privately placed securities between institutional and qualified investors.

Israel is known as one of the major sources of cross-listed companies listed on Nasdaq. As at 31 December 2018, of the 448 Israeli companies whose shares were traded on the TASE, 57 were dual listed on the TASE and a foreign exchange, the large majority on Nasdaq.³

A fast track for dual listing on the TASE is available under the Dual-Listing Regime for both domestic and foreign companies that have been traded for more than one year on certain foreign exchanges (Nasdaq, the New York Stock Exchange (NYSE), the NYSE American, the London Stock Exchange (LSE) Main Market or High Growth Segment, the Stock Exchange of Hong Kong (HKEX) primary listing, the Singapore Stock Exchange (SGX) Mainboard or primary listing, and the Toronto Stock Exchange (TSX) primary listing), or that have a market cap on such exchanges of at least US\$150 million. The listing procedure under the dual-listing track involves the filing of a simple registration form, which contains certain basic details regarding the issuer and the securities being registered, and incorporates, by reference, certain disclosure documents of the issuer previously filed with the foreign exchange where its shares are traded. Dual-listed companies are exempt from the ongoing Israeli reporting requirements, and are required to file with the ISA and the TASE the same reports and filings (in English) as they file in the jurisdiction of the non-Israeli exchange.

The TASE maintains numerous equity and bonds indices, the most significant of which is the TA-125 Index, which is considered the benchmark index for the Israeli economy. A large portion of trading on the TASE is attributed to traded index-linked financial instruments, particularly exchange-traded notes. Consequently, inclusion in a leading TASE index is highly advantageous to issuers on the TASE, as it creates instant demand for the listed securities. Recent amendments to the TASE by-laws make it a condition for a non-Israeli issuer in many of the TASE's indices to have a 'nexus' (as defined in the TASE by-laws) to Israel.

ii Overview of listing requirements

Pursuant to the Securities Law, to list shares on the TASE a company must have only one class of voting shares ('one share, one vote'), subject to certain limited exceptions that apply to dual-listed companies, based on ISA pre-rulings and Israeli case law.

³ 2018 annual review published by the TASE.

The TASE maintains listing rules that permit companies offering shares to the public for the first time in Israel to list under one of three listing alternatives. Emphasising the liquidity of the securities after the IPO, the TASE requires a minimum public float value and rate, and minimum distribution of public holdings under each alternative. The three different procedures allow issuers to adopt an appropriate listing regime in view of its shareholders' equity, public float, period of activity and company valuation requirements, as summarised in the table below.

Parameter*	Alternative 1	Alternative 2	Alternative 3
Shareholders' equity after listing (million shekels)	25	35	-
Public float value (million shekels)	20	30	80
Period of activity	12 months	12 months	-
'Added value'** in 12 months before listing (million shekels)	4	-	-
Value of public float derived from the shares issued to the public (million shekels)	20	20	80
Value of the company's shares (million shekels)	-	-	200
<p>* In addition, the TASE established rules that enable research and development companies to list their shares under more lenient terms than those set forth in this table, with an aim to attract high-technology companies in their early stages. Certain additional exemptions are available to certain types of issuers under TASE by-laws.</p> <p>** Profits before taxes plus employment expenses, depreciation and net finance expenses.</p>			

In addition, there are minimum public float rate requirements (ranging from 25 per cent to 7.5 per cent, depending on company valuation) and a requirement for a minimum distribution of public holdings (of at least 100 public holders, each holding shares worth at least 16,000 shekels).

Listing rules for a series of corporate bonds require companies to have, upon listing, shareholders' equity ranging from 16–24 million shekels; however, certain listing alternatives provide an exemption from this requirement. In addition, the value of the issued bonds must exceed 35 million shekels and there is a minimum distribution requirement of 35 holders, each holding bonds worth at least 200,000 shekels.

TASE listing rules establish a lock-up period that applies to shares held by pre-IPO shareholders of all newly listed companies (of 18 months for major shareholders and nine months for other shareholders, except that commencing three months post listing, 2.5 and 12.5 per cent of the pre-IPO shares may be sold monthly by such shareholders, respectively), other than sales in a public sale offer and, commencing six months after the listing date, sales in off-market transactions provided that the buyer undertakes to subject the shares to the remaining lock-up period.

The cost of listing on the TASE is based on the size of the IPO (0.02 per cent of the proceeds for shares and 0.01–0.02 per cent of the proceeds for bonds), plus a fixed processing fee of several thousand shekels. In addition, a processing fee is required to be paid to the ISA of 0.03 per cent of the IPO proceeds, plus a fixed fee of several thousand shekels (25 per cent of the fees paid to the ISA are returned if the IPO is not consummated).

iii Overview of law and regulations

The Securities Law and regulations promulgated thereunder regulate the offering of securities in Israel, post-IPO reporting and compliance requirements. The Securities Regulations (Details, Structure and Form of Prospectus and Draft Prospectus) 1969 (the Prospectus Regulations) set forth the disclosure requirements applicable to a prospectus, which is the primary document used for the offering of securities to the public in Israel. The Securities Regulations (Offer of Securities to the Public) 2007 regulate the methods for offering securities to the public in Israel.

The Israeli Companies Law 1999 (the Companies Law) and regulations promulgated thereunder regulate the corporate and governance requirements that apply to Israeli private and public companies (including foreign companies listed on the TASE, with the exception of foreign companies dual listed on exchanges eligible for the Dual-Listing Regime). The Companies Law is generally based on US and English corporate law; however, as the large majority of Israeli public companies have a controlling shareholder holding 50 per cent or more of the shares, many of the Israeli corporate governance rules are aimed at mitigating agency problems related to potential conflicts of interest between the controlling shareholder and minority shareholders.

The ISA was established under the Securities Law, with the primary function to protect the interests of the public investing in securities. The ISA has the responsibility (among others) to review prospectuses in public offerings and approve them for public filing, and to oversee public company compliance during and following the IPO. The ISA also oversees the fair and proper operation of the TASE, and licenses and regulates underwriters and distributors. Additional functions of the ISA include the regulation of mutual funds, investment advisers and trading platforms. It has investigative powers with regard to violations of the laws under its supervision, including the authority to conduct criminal investigations, as well as administrative enforcement powers. The supervision regime under the Securities Law is predominantly disclosure-based and, generally, the ISA does not examine the quality of the company or the securities offered.

As Israeli institutional investors are typically the major investors in Israeli IPOs, in debt IPOs the legal and commercial terms of corporate bonds are greatly influenced by the investment rules that apply to such investors, which include (among others) requirements for special approval procedures for investment in corporate bonds that do not contain certain covenants and limitations on the issuer, as set forth in the applicable regulations and guidelines and in the policies of such investors.

III THE OFFERING PROCESS

i General overview of the IPO process

Although the large majority of IPOs in Israel are structured as primary offerings (i.e., investment in the issuer against the issuance of securities), in recent years several offerings included a secondary offering (i.e., the sale of securities by existing shareholders).

Key players

The key players involved in the public offering process include the issuer's internal team, outside legal advisers, auditors, offering managers (underwriters and distributors), underwriter counsel (typically only in underwritten IPOs) and appraisers, if the issuer's financial statements are based on material appraisals.

The Securities Law distinguishes between underwritten and non-underwritten offerings. In an underwritten public offering, in addition to advising on the pricing and participating in the marketing of the offering, underwriters commit to the effectuation of the offering by undertaking to buy the securities to the extent that they are not purchased by the public, and they also sign the prospectus, thereby assuming liability under the Securities Law for disclosure included in the prospectus. Conversely, the distributors' role is limited to the marketing and distribution of the securities, without assuming any liability for disclosure in the prospectus. The large majority of underwriters and distributors licensed in Israel are Israeli underwriters, although several international investment banks are registered as underwriters. In an underwritten IPO, the consortium of underwriters typically retains a separate counsel and accounting firm, and conducts independent legal and financial due diligence, whereas in most IPOs that are not underwritten, distributors do not conduct due diligence or require opinions of counsel and reliance letters (with the exception of certain offerings by non-Israeli issuers, where it is customary for distributors to sign the prospectus and conduct due diligence). The majority of debt and equity IPOs in Israel are not underwritten.

Offering documents

The primary offering document in an Israeli IPO is the prospectus, which is prepared in Hebrew in accordance with the Prospectus Regulations, and typically includes the following information:

- a* details of the offering, and a description of the securities offered and the underwriting agreement;
- b* a detailed description of the issuer's business;
- c* risk factors;
- d* major shareholders;
- e* use of proceeds;
- f* certain corporate governance matters and related-party transactions;
- g* financial statements, which are typically prepared in accordance with International Financial Reporting Standards, although non-Israeli issuers may prepare financial statements in accordance with US generally accepted accounting principles or international accounting standards as adopted by the European Union;
- h* material appraisals, if information in the financial statements is based on such appraisals;
- i* rating reports in a debt offering, which is rated by a recognised rating agency;
- j* board discussion and analysis (which is substantially similar to management's discussion and analysis in a US offering);
- k* management certifications on the adequacy of internal controls over financial reporting; and
- l* an opinion of counsel in a standard form, relating to the authority to offer the securities and the due appointment of the issuer's directors.

Typically, an IPO prospectus is structured as a 'prospectus subject to completion', which includes the anticipated amount and price of the offered securities, and may be supplemented prior to the public offering by a 'supplementary notice' filed not later than 75 days after the publication of the prospectus and at least five trading hours prior to the closing of the offering. The supplementary notice includes the final amount and price of the offered securities (subject to certain limitations on the scope of changes that may be made to the amount and price in the supplementary notice).

An Israeli IPO prospectus may also serve as a 'shelf prospectus', allowing the issuer to issue additional securities to the public in a relatively short and straightforward process during a period of 24 months after the IPO (which may be extended by an additional 12 months), provided that the issuer, its officers and controlling shareholder meet certain conditions, primarily relating to the absence of violations of disclosure laws.

If the issuer is eligible to list under the Dual-Listing Regime (i.e., its securities are listed on Nasdaq, NYSE, NYSE American or LSE (Main Market or High Growth Segment), HKEX, SGX (Mainboard and primary listing) or TSX (primary listing)), subject to the approval of the ISA, it may prepare a prospectus comprising an offering document prepared in English in accordance with the securities laws applicable to it (e.g., the requirements of Forms S-1 or S-3 for a US domestic issuer, Forms F-1 or F-3 for a foreign private issuer, and Form N-2 for closed-end management investment companies) and an Israeli 'wrapper', which primarily includes details of the offering and a description of the offered securities. Certain US-listed companies, including (among others) US business development companies and a real estate investment trust, have relied on this exemption to offer debt securities and preferred shares only in Israel, using offering documents that were mainly based on disclosures prepared in accordance with US securities laws.

In debt offerings, the offering documents would also include the indenture entered into between the indenture trustee (typically a local trust company) and the issuer. The Securities Law sets forth certain mandatory provisions that apply to the indenture, such as certain mandatory events of default, duties of the trustee and other provisions.

Offering process

An IPO in Israel typically takes three to five months, depending on (among other things) the complexity of the issuer's operations, the issuer's readiness for an IPO and market conditions.

After a preparation period of internal reorganisation, engagement of advisers, preliminary discussions on pricing and the IPO structure, due diligence, drafting of the prospectus and preparation of the financial statements, the first draft of the prospectus is approved by the company's board of directors, signed, and filed with the ISA and the TASE. Drafts of the prospectus may be filed confidentially, although marketing may only begin after the public filing of a draft prospectus or a prospectus.

The ISA review of the prospectus typically includes the review by accounting and legal reviewers. It is common for the review process to include at least one in-person meeting with the ISA staff at the ISA's offices. The TASE's review process is generally more technical, and is designed to ensure compliance with the TASE by-laws and listing requirements. During the review process, several additional drafts of the prospectus are typically filed with the ISA and the TASE. If the company has publicly filed a draft prospectus during the process, it is required to publicly file any subsequent draft simultaneously with its filing with the ISA and TASE. Once a near final prospectus is ready, the ISA's prospectus committee reviews and approves the prospectus. Subject to the committee's approval, the ISA chairperson then issues a permit to publish the final prospectus, which is subsequently publicly filed.

The marketing of the offering typically commences before the final prospectus is filed, following the publication of the first public draft of the prospectus. The marketing stage usually includes an investor roadshow and negotiations with investors on the terms of the offering, and in debt offerings, on the legal and commercial terms of the bonds.

The Securities Law provides that securities offered to the public under a prospectus must be sold at an equal price to all buyers, with the exception of reasonable early commitment fees and distribution fees.

IPOs in Israel may be effected in one of two methods.

Uniform offering

Almost all offerings of securities in Israel are made through a uniform offering, which is essentially a 'Dutch auction' that is open to all investors (including retail investors) on equal terms and does not involve a book-building process. It is prohibited to state a maximum price (or minimum interest rate) for the securities offered, although the ISA has recently proposed to amend the Securities Law to cancel this prohibition.

To enhance the likelihood of a successful offering, the issuer typically obtains early commitments from 'classified investors' (primarily, certain types of institutional investors as well as entities with shareholders' equity exceeding 50 million shekels) to place bids at the public auction in specified amounts and prices, in return for an early commitment fee (a discount on the purchase price). Early commitments are also provided through an auction open to classified investors. Up to 95 per cent of the amount offered to the public can be secured through early commitments, depending on the size of the offering.

After the classified investor auction and before the public auction, the company files a supplementary notice (or the final prospectus, as applicable), detailing the final offered amount of securities and minimum price of the securities offered, as well as the early commitments obtained by the issuer.

Bids at the public auction are placed through TASE members. Classified investors that provided an early commitment are given precedence in allocation over bids made by the public for the same price, unless the offering is more than five times oversubscribed.

Two types of overallotment options are available to the issuer in a uniform offering, exercisable within one business day following the closing of the offering: the issuer may issue up to an additional 15 per cent of the offered amount to classified investors who provided early commitments and, if the offering was oversubscribed, the issuer may issue up to an additional 15 per cent of the offered amount to all investors who bought securities in the offering.

Non-uniform offering

In a non-uniform offering, the allocation of securities among investors is made by the underwriter and the issuer, which may conduct a book-building process. A non-uniform offering is not open to the public (although it may be combined with a tranche of up to 30 per cent of the offered amount, which may be offered to the public through a uniform offering), and only certain types of institutional investors may participate in such offering. In addition, an underwriter must underwrite at least 25 per cent of the offering, sign the prospectus and assume liability for the disclosure included in the prospectus, although the ISA has recently proposed to abolish the requirement for underwriting in non-uniform offerings.

The limitation on the types of investors who may participate in the offering and the underwriting requirement, coupled with the fact that the Israeli market is accustomed to the Dutch auction uniform offering method, make the non-uniform offering method significantly less popular in Israel and it is rarely used.

In a non-uniform offering, the issuer may grant the underwriter or underwriters an overallotment option to purchase up to an additional 15 per cent of the amount offered, during the 30 days from the closing of the IPO, to sell the securities or cover a short position taken in connection with the offering.

ii Pitfalls and considerations

Among the matters to consider before commencing an IPO process in Israel are the following.

Potential liability and the importance of conducting a comprehensive due diligence review

Pursuant to the Securities Law, a prospectus must contain all information that may be material for a reasonable investor, and shall not contain any 'misleading information'. The offeror (the issuer or selling shareholder), the directors, chief executive officer, controlling shareholder of the issuer, and the underwriter or underwriters – if the offer is underwritten – bear criminal, administrative and civil liability for misleading information included in the prospectus, including the failure to disclose material information. The liability also extends to experts who provided an opinion or report that was included in the prospectus (typically, audit reports, appraisals and opinions of counsel) with regard to a misleading item contained in such opinion or report. The Securities Law sets forth certain defences against liability, including the 'due diligence defence', which is available to persons who have taken all adequate measures to ensure that the disclosure does not include any misleading information and believed in good faith that no such misleading information was included; however, Israeli case law has narrowly interpreted this defence. In underwritten IPOs, the common practice is for the underwriter to receive comfort letters and negative assurance letters from the issuer's external counsel and officers; however, it is not common practice for the issuer to obtain such letters in IPOs that are not underwritten (which is the majority of Israeli IPOs in recent years).

Marketing restrictions

It is important to adhere to the publicity guidelines, as the ISA has in the past halted IPOs that did not follow the legal restrictions on marketing. Generally, the offer of securities to the public in Israel is only permitted based on a publicly filed draft or final prospectus. This general rule has been interpreted to apply to a wide range of communications, including advertisements, media interviews and investor presentations, and issuers must be mindful of the fact that all such communications during a 'quiet period' commencing one month prior to the publication of the prospectus may be deemed to violate the rule. Although the ISA has established guidelines permitting 'test-the-water' exercises with certain types of classified investors before the public filing of a draft prospectus, interaction with such investors must cease at least 15 days prior to the filing of the prospectus, and all material information provided to such investors must be included in the prospectus. It is common practice to publicly file investor presentations to avoid the risk of material information not being included in the prospectus.

Future application of Israeli corporate governance rules

Israeli companies with publicly traded equity or debt securities are subject to a relatively onerous corporate governance regime, which requires special approval processes for related-party transactions, including the requirement for the approval of the audit committee, board of directors and the majority of the minority shareholders for certain transactions with a controlling shareholder or in which a controlling shareholder may have a conflict of interest. In addition, a company with publicly held securities must appoint at least two 'external directors' who are not affiliated with the company or its controlling shareholder (subject to limited exceptions). The compensation of directors and officers of a public company is also subject to certain limitations and approval requirements under the Companies Law.

Stabilisation

Although local regulation permits stabilisation activities under certain conditions, in light of the nature of the offering structure in Israel, post-IPO stabilisation is not common practice and there are no recent precedents for such stabilisation activities. The Securities Law and the Securities Regulations (Stabilisation) 2012 set forth strict limitations on post-IPO stabilisation activities, mainly consisting of a requirement that any transaction for the purchase on the TASE of offered securities during the 30-day period following the public offering must be made by one designated pricing underwriter and that the identity of the seller is not known to the stabilising underwriter, as well as limitations on the transaction prices and disclosure obligations relating to the stabilisation activities.

iii Considerations for foreign issuers

Historically, foreign companies typically listed on the TASE in connection with the acquisition (or contemplated acquisition) of an Israeli company listed on the TASE (such as Perrigo's listing in 2005, Mylan's listing in 2015 and IFF's listing in 2018). However, in recent years, there has been an increase in the number of foreign-listed companies as a result of the recent trend of debt IPOs in Israel by US companies and the listing of the bonds for trading on the TASE.

Substantially the same listing requirements and procedures that apply to the listing of securities on the TASE by Israeli issuers apply to listings by non-Israeli companies. In addition, a non-Israeli issuer is required to provide to the TASE an opinion of foreign counsel confirming that, under the laws of the issuer's country of organisation and, if applicable, under the rules of the foreign exchange on which the issuer's securities are traded, the issuer may issue securities to the public in Israel in the manner contemplated in the prospectus, and the securities are freely tradable on the TASE. Before the listing of a foreign issuer, the TASE may also seek to regulate certain issues related to withholding tax on dividends and interest (to the extent applicable).

One important consideration for non-Israeli issuers is the future application of Israeli corporate law to the issuer. Although the Companies Law primarily only applies to companies organised under the laws of the state of Israel, the Securities Law applies certain corporate governance provisions of the Companies Law to non-Israeli companies that offer their shares or debt to the public in Israel. These provisions include (among others) limitations on related-party transactions and transactions with a controlling shareholder, and requirements relating to the composition of the board of directors, audit committee and compensation committee, including a requirement to appoint external directors, the fiduciary duties of directors, restrictions on distributions and tender offer rules. The ISA is authorised to exempt a foreign issuer from the application of all or part of the provisions of the Companies Law, if it determines that the home country laws provide sufficient protection for investors. In addition, foreign issuers listed under the Dual-Listing Regime are exempt from the application of the Companies Law.

The structure of the prospectus for offers by non-Israeli issuers that are not listed under the Dual-Listing Regime is generally the same as those of Israeli issuers, and the prospectus must be prepared in Hebrew, subject to certain exceptions. In addition, the ISA typically requires the issuer to include a comparison between Israeli corporate law and the corporate law of the issuer's jurisdiction of incorporation.

Issuers listed under the Dual-Listing Regime benefit from various exemptions relating to the structure, format and content of the prospectus and, subject to the approval of the ISA,

publish a prospectus comprising an offering document prepared in English in accordance with the foreign securities law and an Israeli wrapper. Dual-listed issuers are required to provide the ISA with an opinion of foreign counsel confirming, among other matters, that the prospectus filed in Israel complies with the prospectus requirements of the foreign securities law that would have applied to the offering if it were made in the jurisdiction of the foreign exchange where the issuer's securities are listed, subject to certain exceptions.

IV POST-IPO REQUIREMENTS

Following the IPO, listed companies are subject to ongoing reporting and disclosure obligations, including, among others:

- a* an annual report consisting of a comprehensive description of the issuer's business and certain corporate governance matters, audited annual financial statements, and management discussion and analysis;
- b* quarterly reports consisting of material updates to the annual report accompanied by reviewed quarterly financial statements, and management discussion and analysis. Certain issuers that are deemed 'small corporations' with no traded debt securities may exempt themselves from the quarterly reports requirement and only file semi-annual reports;
- c* reports relating to the occurrence of certain events set forth in the relevant Israeli securities regulations, such as changes in management, adoption of certain resolutions by the issuer's corporate organs and changes in the holdings of major shareholders; and
- d* immediate reports upon the occurrence of material or extraordinary events.

The ongoing reporting requirements apply to both Israeli and foreign issuers, except that, as previously discussed, companies subject to the Dual-Listing Regime are exempt from the large majority of Israeli reporting requirements, provided that they are required to file with the ISA the same reports and filings (in English) as they file in the jurisdiction of the foreign exchange on which they are also traded.

Following the IPO and listing on the TASE, the issuer is subject to general provisions of the Securities Law, such as the prohibition on insider trading and market manipulation, in addition to many of the Israeli corporate governance rules, subject to certain exceptions, as described above.

V OUTLOOK AND CONCLUSION

Following a strong start to 2018, the second half of 2018 was characterised by a sharp decrease in the number and volume of equity and debt IPOs in Israel, and a significant rise in bond yields, particularly bonds of US real estate issuers. The TASE and the ISA are continuing to promote various initiatives to encourage non-Israeli issuers to list on the TASE, including a recent ISA legislative proposal to allow foreign issuers of securities in Israel to file their reports in English instead of Hebrew, and the recent publication by the ISA of a comprehensive bulletin clarifying the rules that apply to the public offering of securities, listing and delisting, and ongoing disclosures by dual-listed companies.

ABOUT THE AUTHORS

NITZAN SANDOR

Fischer Behar Chen Well Orion & Co

Nitzan Sandor is a partner in FBC's corporate and securities department. Ms Sandor's practice concentrates on capital markets and M&A. Ms Sandor represents major Israeli public companies and dual-listed corporations on securities laws matters, and has represented issuers in several of Israel's largest securities offerings. Ms Sandor advises on cross-border capital markets and corporate transactions, and also advises clients in connection with regulatory reforms in corporate and securities laws, and in the regulation of investment companies. Ms Sandor is listed in *The Legal 500*, and has been listed as a 'leading lawyer' by *IFLR1000* and *Chambers Global*.

SHARON ROSEN

Fischer Behar Chen Well Orion & Co

Sharon Rosen is a partner in FBC's corporate and securities department, and leads the firm's US capital markets practice. Ms Rosen's practice primarily focuses on international capital markets, private and public M&A transactions, with an emphasis on cross-border transactions, and general corporate advice. Ms Rosen provides ongoing corporate and securities law advice to Israeli companies publicly traded in the United States. Prior to joining FBC in 2011, Ms Rosen was a member of the corporate and securities department of a prominent law firm in New York, and a member of its Israeli practice group (2004–2011). Ms Rosen is a member of the Israel Bar and the New York State Bar.
